

Arterial Sonogram

- In-office, non-invasive, painless exam
- Takes approximately 25 minutes
- For Diabetics over age 60 and patients with known peripheral arterial disease (PAD)
- Identifies narrowing, calcification (plaque) and possible occlusions (clots)
- Typically covered by Medicare and most major insurances (when symptomatic)

Arterial Sonogram of the legs can help patients understand their risk for developing serious conditions **before** symptoms are present...while they can still act.
